Abdulrahman H. Alsaafin
BSIT 4th Year – Set A

STEP 23 — IT CAREER DEVELOPMENT PLAN

Career Goal: Cybersecurity Professional and Future Master's Degree Student

Career Direction

My long-term career direction is to specialize in cybersecurity after completing my BSIT degree. I plan to gain practical IT and security experience first, then pursue a master's degree in cybersecurity or a closely related field. My goal is to develop both technical and academic expertise so I can work professionally in cybersecurity and eventually take on more advanced security responsibilities.

Career Area	Development Plan
Target Position	Entry-Level Cybersecurity Analyst / Security Operations (SOC) Analyst, with the long-term goal of progressing into advanced cybersecurity roles.
Target IT Field	Cybersecurity — with particular interest in defensive security, security monitoring, vulnerability management, incident response, and secure systems.
Current Skills	Basic web development, HTML/CSS/JavaScript, programming fundamentals, database concepts, SQL, basic networking concepts, troubleshooting, documentation, data analysis, and experience using AI as a productivity and learning tool.
Skills to Improve	Networking and TCP/IP, Linux administration, system security, vulnerability assessment, incident response, security monitoring, authentication and access control, scripting/automation, and cybersecurity risk management.
Technologies to Learn	Linux, Wireshark, Nmap, SIEM platforms, Python for security automation, Git/GitHub, virtual machines, cloud security fundamentals, firewalls, vulnerability-scanning tools, and security logging/monitoring technologies.
Certifications to Consider	CompTIA Security+ as an initial cybersecurity certification; later consider certifications aligned with experience and career direction, such as CompTIA CySA+, ISC2 certifications, or other recognized security credentials.
6-Month Goal	Build a stronger cybersecurity foundation by studying networking, Linux, security fundamentals, and defensive security. Complete practical labs and small security exercises, organize a cybersecurity portfolio, and begin preparing for an entry-level security certification.
1-Year Goal	Obtain or actively pursue an entry-level IT/cybersecurity position or internship, strengthen hands-on security experience, complete relevant projects and labs, and prepare for or begin a recognized cybersecurity certification.
3-Year Professional Goal	Become an established cybersecurity professional with practical work experience and begin or complete a master's degree in cybersecurity or a related field. Develop deeper expertise in defensive security, incident response, security operations, or another specialized area.

Personal Development Strategy

I will follow a gradual path: strengthen my current BSIT foundation, gain hands-on cybersecurity experience, obtain relevant certifications, build professional experience, and then pursue master's-level study. I will prioritize practical understanding instead of collecting certifications without experience. My portfolio will be used to document projects, troubleshooting cases, cybersecurity research, and other evidence of my developing skills.

Career Vision

My ultimate goal is to become a knowledgeable and capable cybersecurity professional who can protect systems, identify security risks, respond to incidents, and continuously improve organizational security. Pursuing a master's degree in cybersecurity will support my long-term goal of developing deeper technical knowledge, research ability, and professional expertise.
